DETAILED ACTION

Priority

Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 120 as follows:

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

The instant application is a continuation of 08/850,127, which claims priority from 60/017,016 (which priority is at least partly claimed in the oath/declaration). However, the first sentence lacks the required priority statement.

Claim Objections

Claims 5 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject

Art Unit: 1636

matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

In the instant case, the claim limitations of claim 5 are identical to the claim limitations added by amendment to claim 4, and thus claim 5 does not further limit claim 4. It should also be noted that claims 6-7 depend partly on claim 5, thus if claim 5 is canceled, then claims 6-7 should be amended accordingly.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before

Art Unit: 1636

November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 2, 4-6, 8, and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Pomerantz et al (U.S. Patent No. 6,326,166 B1).

Pomerantz et al teach a chimeric protein comprising a DNA binding domain and further comprising one or more transcriptional activation domains, such as one or more copies of the 18 amino acid (NFLQLPQQTQGALLTSQP) glutamine-rich region of Oct-2 (which comprises at least 5/18 hydrophobic amino acids, F and L, and thus is greater than 25% hydrophobic amino acids) (Columns 11-14, especially column 14). The protein reads on the claimed transcriptional activator because it comprises the two functional domains and based upon the hydrophobic nature of the activation domain, which domain is identical to 1/2 of two transcriptional activation domains of claim 10, LS4 and LS19, it appears that the transcriptional activator taught by Pomerantz et al would inherently fail to squelch transcriptional activation by either LexA-Gal4 or LexA-Gal11. The peptide also reads on approximately 17 amino acids in length and includes at least one aromatic amino acid (F) and no basic amino acids.

Allowable Subject Matter

Claims 3, 7, and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

No claims are allowed.
